

100 Days of Cognitive Augmentation Challenge

Day 1

Emotional Spectrogram: Visualizing Affective States

A Generative Interface for Emotional Reflection

Human emotion is fluid, yet traditional digital journaling is static and text-based.

This project bridges the gap between **Natural Language Processing (NLP)** and **Generative Art**, creating a feedback loop where users can "see" the texture of their feelings.

It transforms the syntax of a diary entry into the physics of a watercolor painting.

"I feel anxious but hopeful"

The Architecture

The Generative Pipeline

From Lexicon to Fluid Dynamics.

The Process:

1. **Input:** The system scans raw text against a custom **Affective Lexicon**, mapping over 300 synonyms to specific emotional valences.
2. **Process :** Text is converted into a numeric "DNA Sequence" (0-9).
 - 0-3 (*Negative*): Triggers gravity, chaos, and heavy viscosity.
 - 4-6 (*Neutral/Arousal*): Triggers static lines and geometric spirals.
 - 7-9 (*Positive*): Triggers radiance, buoyancy, and flow.
3. **Output:** An HTML5 Canvas engine uses **composite blending modes** (Multiply) to simulate the mixing of wet watercolor paint in real-time.

Algorithmic Abstract Expressionism

Temporal Blending: The painting reads from left to right, visualizing the user's emotional journey through time.

High-Fidelity Rendering: Utilizes clustered particle systems to create organic, non-repetitive textures.

Use Cases: Mental Health Visualization, Expressive Therapy, Ambient Data Art.

I woke up feeling completely empty and lost. The grief was heavy, like a deep blue rain that wouldn't stop. I felt lonely and full of regret. But slowly, I started to feel a spark of hope. I began to plan my future and focus on my goals. By the afternoon, the sun came out and I felt a sudden burst of joy. Now, I am laughing with friends, feeling sunny, awesome, and full of play. It is a great day

The argument was a total disaster. I was furious and burning with rage! We screamed at each other, full of hate and aggressive conflict. I wanted to destroy everything. Then, a sudden boom shattered the silence! I was terrified. Panic took over. My heart was pounding with anxiety and fear. I wanted to run and hide from the danger. It was total chaos and shock.
